

# Kinesis

Bringing experts together

## Genuine Detector Lamps

**Premium Quality, low cost!**

Kinesis Limited has now been manufacturing/pre-aligning Deuterium lamps for over 3 years.

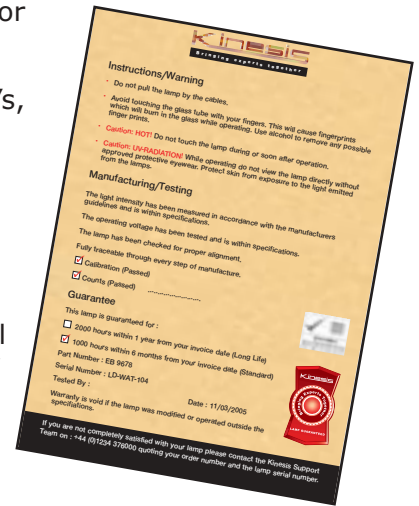

In recognising the importance of using genuine lamps supplied by the OEM's, Kinesis has formed strong partnerships with manufacturers who produce the majority of the lamps fitted in today's leading detectors (including the Agilent 1100 and Waters 2487 models).

Bare lamps supplied directly to Kinesis are aligned and tested at our UK facility in accordance with stringent guidelines verified by the manufacturer.

All Kinesis lamps are then certificated recording the date of manufacture, serial number, testers name and the counts reading for future traceability. Only lamps made to the strictest tolerances receive the Kinesis Genuine Lamp Seal.

This means that Kinesis provide lamps at a fraction of the price without any compromise on quality.

We offer a comprehensive range including the original Shimadzu SPD10A, the Waters 2487 and both the Agilent 1100 DAD and VWD.
